

Main Event® Black Strap DF Molasses (Dry Flowable)

Main Event Black Strap Dry Flowable Molasses Concentrate is a great source complex carbohydrate carbons for turf. Derived from concentrated Florida Black Strap Molasses in an easy to use no mess Dry Flowable Crystal 100% soluble form.

What is Main Event DF Molasses functionality in the plant and in the soil?

Black Strap Molasses contains various complex high carbon sugars both normal and inverted that plants and soil biota thrive on

Molasses has shown to reduce thatch in turf when applied regularly

Molasses has shown to increase and synergize beneficial microbe populations in the soil and to increase total soil biota activity levels

Black Strap Molasses contain various sugar based complexing and chelating agents that “free up” or make elements more available to plants and biota

Active soil biota can improve fertilizer efficiency, uptake, assimilation, and utilization by plants

Molasses applied to plant foliage has shown to help reduce stress, increase plant vigor, and increase plant brix levels which is an indicator of general plant health and vitality.

Molasses applied to foliage has pronounced surfactant properties, of spreading, wetting, sticking and increased uptake of nutrients and performance of various pesticide products.
